Deal with dust and dirt with

TRI-FLOW™

lubricating quarry plant and machinery

Keeping things moving in the testing environment of a quarry is not easy. At Breedon Quarries the introduction of Tri-Flow has had a dramatic effect on production efficiency and standards of maintenance.

A can of Tri-Flow is carried on most of Breedon's lorries, dump trucks, loading and crushing equipment. Breedon's buyer for all spare parts and lubricants, reports:-

"Tri-Flow is much more efficient than other lubricants. We can keep going much longer with fewer applications. Downtime is reduced dramatically as maintenance is quicker and easier." Compared to other lubricants Tri-Flow:-

Uses a light mineral oil and solvents and does not form an abrasive paste. Acts as an excellent release agent, penetrating even the most inaccessible areas. Keeps parts moisture free, preventing the formation of rust – for example, in the cores of steel ropes.

Will help to prevent breakdown and minimise downtime.

Tri-Flow, the remarkable advanced lubricant, outperforms conventional lubricants. Based on P.T.F.E. which has been described as "the slipperiest substance in the world".

Tri-Flow displaces dirt, dust and other abrasive matter and forms a protective coating to keep treated surfaces clean. It also requires less frequent application significantly reducing costs.
