Set your sights on

TRI-FLOW™

protection for all types of guns

Chris Lewis who was until retirement, Proof Range Officer for leading munitions manufacturer Eley Ltd., is a man who knows something about the care of guns. He first started work in the gun trade more than 40 years ago at Greeners, the celebrated gunsmiths of Birmingham, and was with Eley since 1963. Chris Lewis has used Tri-Flow as a gun oil for years.

Tri-Flow's remarkable properties mean that it works as a highly efficient lubricant, penetrating the most inaccessible areas and displacing dirt and moisture. Unlike other lubricants it doesn't leave a sticky residue. Instead, it forms a smooth and lasting protective coating. In addition, Tri-Flow contains a suspension of Teflon* which not only substantially improves the lubrication properties but also assists on the physical removal of dirt and contamination from moving parts.

"Other oils can combine with unburned powder residue, forming a solid mass which is extremely difficult to remove and which can even damage a weapon," explains Chris Lewis. "Tri-Flow doesn't do this."

Chris also appreciates Tri-Flow's water repellent properties. "It is extremely effective in protecting a stored gun from corrosion which damp can cause," he says. "In the same way, rainwater simply runs off treated parts of the gun and even wiping down with a damp cloth leaves Tri-Flow's protective coating intact."

Tri-Flow penetrating power derives much from its extremely low viscosity, therefore it only needs to be applied in sparing quantities. Other oils tend to be heavily applied and can contaminate the wooden stock, making it soft and spongy.

For lubrication of bolt and trigger mechanisms, shotgun actions, ejector mechanisms and all external surfaces.

Tri-Flow has no equal. Its effective temperature range - 53°C to 246°C means that it maintains its outstanding properties in rapid fire weapons. The standard dropper bottle allows accurate spot lubrication and the plastic container prevents the scratching which metal containers can cause when carried loose.

Tri-Flow might have been developed specially for use on guns. It provides the ultimate in lubrication and protection in every area of application. That's why experts like Chris Lewis use nothing else.
