Keeping production moving with

TRI-FLOW™

maintaining plant operation

"I know you'd expect me to say it" laughs Ronseal's Harry Sidebotham, "but Tri-Flow really is extraordinarily effective."

Harry is Manufacturing and Maintenance Manager at the Ronseal factory in Sheffield where such brand names Colron, Ronseal, Isoflex and Thompson's Water Seal are made. But Ronseal is also the home of Tri-Flow where the high-performance lubricant is in constant use, helping to overcome problems and ensuring the smooth operation of production lines.

Trevor Steer is the charge hand with responsibility for maintenance at Ronseal. He describes some of the areas in which Tri-Flow is put to work.

"Take the filling machine we use for Thompson's Water Seal, a spirit-based sealant. Even a small spillage can slow things down. A tacky coating forms on the slide conveyor and around cylinders. A quick squirt of Tri-Flow makes all the difference, it helps to keep parts clean and trouble-free much longer."

Trevor is never without a Tri-Flow aerosol. He uses it for routine maintenance, stripping and rebuilding production line machinery. It makes light work of freeing clogged and seized components in the numerous centrifugal and gear pumps which supply production lines.

Tri-Flow's power as an easing fluid is something Trevor particularly appreciates. When he needed to remove an inspection cover from an external storage tank, the bolts were corroded solid by ten years of Yorkshire weather. One quick application of Tri-Flow and Trevor had them moving in no time.

You don't need to work for Ronseal to enjoy the benefits of Tri-Flow brings. Lubricating and penetrating, it displaces dirt, dust and moisture, forming a protective coating which helps to keep things moving. Tri-Flow makes life easier and improves efficiency in almost every walk of life.
