On the road to success with

TRI-FLOW™

helping to boost productivity at Pirelli

Staff at Pirelli's Tyre Division in the U.K. are dedicated to productivity and claim to operate one of the most efficient production units in Europe. Tri-Flow the remarkable advanced industrial lubricant from Ronseal plays a big part in maintaining their proud record.

The Pirelli factory, manufactures car and truck tyres, working round the clock seven days a week. The intricate mechanisms which make up tyre moulds are extremely costly and, were it not for Tri-Flow, such cost-effective volume production would be impossible to maintain. Pirelli's Safety Officer explains:

"The tyre mould mechanisms easily become seized. Dirt and grime quickly accumulate around the flanges, stopping them from moving. Previously we had to stop to clean them – which wasn't easy – and so much wear and tear drastically reduced their useful working life. With a quick application of Tri-Flow they're easily freed and keep working for much longer."

The Maintenance Supervisor is especially enthusiastic about Tri-Flow – it makes his work so much easier: "Without Tri-Flow we'd be dead! It saves us a fortune. We've used other lubricants but nothing I've ever seen works as well as this. We use it, not only on the tyre mechanisms, but anywhere and everywhere to keep parts clean and keep them moving smoothly."

With its unique formula, Tri-Flow penetrates even the most inaccessible areas, forming a protective coating that repels dust, dirt and moisture, helping to keep things moving.
