TRI-FLOW™

machinery care in the textile industry

The environment that exists in areas of laundries can be severe! Moisture, heat, dust, condensation and aggressive vapours may all contribute to very time consuming and costly maintenance of equipment.

The experience of Hokatex BV Holland shows that these problems can be overcome. Hokatex BV had a problem with their Monorail system in the drying tunnel. A particularly severe environment of steam, dust, lint and grease as well as oxidising due to cooling down in the evenings meant that the tunnel needed maintaining on a very regular interval. The Monorail carriages frequently jammed due to lint accumulation in the tracks which in turn caused the chains working life to be much reduced. These chains (3) which transported the garments through the drying process, needed replacing every three years and at great expense.

Thanks to the introduction of Tri-Flow Industrial Lubricant, these chains have had their lives extended to six years, and with just monthly applications of the lubricant, down time caused by jamming has almost been eliminated. Tri-Flow, the remarkable advanced lubricant with Teflon, out-performs most other lubricants. Tri-Flow displaces moisture, dirt, dust and abrasive matter and forms a protective coating to keep treated surfaces clean and well lubricated. Parts need less frequent applications of Tri-Flow significantly reducing costs.

Having experienced all the advantages of Tri-Flow for so many years, Hokatex BV confidently benefit from using Tri-Flow throughout their factory.
